# MLBC195-01: C# Basic Project 2 – Text Editor

Charl William Roesch

Student Number: 4tlhs2ld9

Summary

I chose to develop Project 2 – Text editor, as the project is more applicable to business solutions than the Poker game project.

I developed the "O My Word – Text Editor" Application. This application is able to Open, Edit, Save and Close .rtf format files.

Attached you will find the following layout for the project:

- **Documentation**
  - Original Specification
  - Technical Specification
  - User Manual

- **Release**
  - Official Release OMyWord Application and Resources

- **Source Code**
  - OMyWord application solution and all source code.

Please use the provided documentation when reviewing the application and its source code to get more insight into my thinking process while developing the OMyWord application.

Developer Notes

As a developer, I have a lot of pride in what I do, as it is a passion of mine and would appreciate any criticism or pointers to improve my development skills.

You will notice that I, in some cases used different controls then what was specified. As a developer, I believe it is essential to provide a client with specialist consultation and provide recommendations on a specification and to develop and deploy the best and most practical solution.

Please NOTE: On the first run of the released version, when attempting to add an emoticon. There will be exceptions relating to missing resources. This was done on purpose to demonstrate the use of exception handling. The Resources_Test folder will automatically be corrected to Resources by the catch block. Emoticons can be added right after without restarting the application.
